FCC Warning

The OPTOLINX Fast Ethernet WDM Converter has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These standards are designed to provide reasonable protection against harmful interference when these devices are operated in a commercial environment. This device generate, use, and can radiate radio frequency energy and may cause harmful interference to radio communications unless installed in accordance with this User's Guide. Operation of these devices in a residential area is likely to cause harmful interference which will make the user responsible for the appropriate remedial action at his/her own expense.

CE Mark Warning

These are Class A products. In a domestic environment these products may cause radio interference in which case the user will need to consider adequate preventative methods.

1. Checklist

The OPTOLINX Fast Ethernet WDM Converter carton should contain following items:

- OPTOLINX FAST ETHERNET WDM CONVERTER
- AC-DC Power Adapter

Please notify your sales representative immediately if any items are missing or damaged.

2. Overview

The OPTOLINX Fast Ethernet WDM Converter is designed to meet the needs for massive optical fiber network deployment. This solution allows users to extend a legacy copper based network via fiber cable to a maximum distance of up to 20KM.

The OPTOLINX Fast Ethernet WDM Converter is fully compliant with IEEE 802.3 & 802.3u standards; built-in Switching ASIC allow the OPTOLINX Fast Ethernet WDM Converter to function more like a 2 ports switch rather than just a traditional converter. Users can get all switching benefits such like traffic segmentation, frames checking, and error filtering. In addition, the Link Alarm allows users to monitor & maintain their critical fiber link more easily and effectively.

The installation & operation procedures of the OPTOLINX Fast Ethernet WDM Converter are simple & straightforward. Operation status can be monitored through a set of Diagnostic LED located in the front panel.

Features

- 10/100Base-TX to 100Base-FX converter
- Store & Forward switching mechanism
- Complies with IEEE 802.3, 802.3u standards
- MDI/MDIX Auto-Crossover supported
- Auto-Negotiation or Manual mode setting of Speed & Duplex mode
- LED Indication
 - Power, FDX,
 - TP 100, TP Link/Activity
 - FX 100, FX Link/Activity
- Link Alarm function

3. Installation

The installation procedure is simple and straightforward.

- Attach fiber cable from the OPTOLINX Fast Ethernet WDM Converter to the fiber network.
- Attach UTP cable from the 10/100Base-TX network to the RJ-45 port on the OPTOLINX Fast Ethernet WDM Converter.
- Connect the power adapter to the OPTOLINX Fast Ethernet WDM Converter and check that the Power LED lights up. The TP Link and FX Link LED will light when all the cable connections are satisfactory.

4. LED Description

LED	Color	Function
PWR	Green	Lit when power is available
FX 100	Green	Lit when FX port speed is 100M
FX Link/ACT	Green Blink	Lit when fiber link is up Blink when traffic present
FDX	Green	Lit when TP port Full Duplex Mode is enabled
TP 100	Green	Lit when TP port speed is 100M
TP Link/ACT	Green Blink	Lit when TP link is up Blink when traffic present

5. Technical Specifications

Standards	IEEE 802.3 & IEEE 802.3u
Switching Mechanism	Store & Forward
MAC table	1K Entries
Forward & Filter Rate (64 Bytes)	10Base-T 14,800 pps 100Base-TX 148,800 pps
LED	Power, FDX, TP 100, TP Link/Act, Fiber 100, Fiber Link/Act
Power	DC 5V, 1.6A
Power Consumption	5W
Weight	1.8LB
Dimensions	71mm x 97mm x 26 mm (W x D x H)
Temperature	Operating: 0 ~ 50 °C Storage: -20 ~ 60 °C
Humidity	5% ~ 90% RH
Safety	UL, CSA
Emission	FCC Class A, CE
UTP	Cat. 5 UTP cable
Fiber	8.3/125, 8.7/125, 9/125 or 10/125 μ m single-mode

6. Rear Panel DIP Switch

Pin 1 Off/On	TP Auto-negotiation	Enable/Disable
Pin 2 Off/On	TP Speed	100M/10M
Pin 3 Off/On	TP Duplex	Full / Half
Pin 4 Off/On	Link Alarm	Disable/Enable

Default is set to **OFF** from PIN 1 to PIN 4

Please perform Power On reset after modifying the DIP switch setting and firmware upgrade.

7. Link Alarm

The Link Alarm allows users to easily identify and diagnose the linking status. If the Link Alarm switch is set to Enable, the UTP and Fiber port can link up only when both linking conditions are good. In addition, if any of the fiber or UTP port link is down during operation, the other port will also go down to alert the user. Turning the Link Alarm switch to Enable provides users a transparent link indication between two network devices interconnected by the OPTOLINX Fast Ethernet WDM Converter.

If the Link Alarm is disabled, the UTP and fiber port will link up based on their individual linking condition. Further, if the fiber port link is down during operation, it will not turn off the UTP port link and vice versa.

Notice

The Link Alarm will be effective only when the TP Auto-negotiation is enabled.
This version of user's guide is only valid for hardware version H or later version.
